PROFILE

I am a web developer with professional experience in the front-end development field who can develop websites and web applications that are responsive and render well across multiple devices. I have core knowledge of HTML5, CSS3, and JavaScript as well as I'm experienced with the latest cutting-edge development tools and procedures which allow me to self-manage independent projects as well as become a collaborator who can be a part of the productive team.

EXPERIENCE

<u>Web Developer</u> at HD software, Gujarat

JOB Responsibility

- Optimizing the user experience
- Developing and maintaining the user interface
- I'm currently working on a Hospital management project where I am developing web pages for hospital employees and patients' appointment booking webpage according to matching doctors' profiles.
- I work mainly on client-side scripting to make websites functional on multiple devices and browsers.
- I also do meeting with clients about what their need and get a Visual representation of what they want to build.

PROJECTS

Get IT done

JavaScript, HTML, CSS, React.JS

➔ This is a **ReactJS based single-page application** where people can add their ideas, thoughts, and reminder notes in this app for future use.
➔ App also has day and night **toggle mode** for user convenience.
➔ It provides **a search function** to find any note from all available notes by writing a word.
➔ *Source Code*

Predator 700

HTML, CSS

➔ This is a PURE website only using **vanilla HTML and CSS** codes.
➔ The website consists of six **HTML pages** home, product, catalog, comparison, photos, and contact-us.
➔ All pages have their **CSS styles** file where I have used **animation, gird, keyframes, box, transform**, etc.
➔ I have also included **Google Map API** in contact-us pages.
➔ *Source Code*

GitHub Finder

JavaScript, HTML, CSS, React.JS

➔ The "Github finder" application uses the **Github API to search for users**, list their details and their repositories.
➔ This page displays a search bar in which the user can search Github users by their username. The page displays the **results from the Github API** based on the matched characters.
➔ After entering a certain name into the input field, **the page is populated with the results** from the API.
➔ *Source Code*

Nike Store

HTML5, CSS3, JavaScript

- ➔ This is a Nike sneakers footwear store website where end-user can purchase their products.
- ➔ It features five different brands (AirForce, Jordan, Blazer, Crater, and Hippie) options to choose from which are also come with images of each footwear.
- ➔ *Source Code*
